PROFILE

Computer Science Honours graduate specialising in software development, with commercial experience building full-stack web and mobile applications. I design data models and REST APIs, build React front ends, and have taken my own software from idea to release and cloud deployment. I work comfortably with clients and end users, from gathering requirements and writing specifications to documentation and usability testing. I also have a background in Unity-based VR development and a methodical, root-cause approach to debugging.

TECHNICAL SKILLS

Languages	Python, JavaScript (ES6+), SQL, C#, HTML5 / CSS3, TypeScript (working knowledge)
Frameworks	React, React Native (Expo), Node.js (Express), FastAPI, Unity (VR)
APIs & data	REST API design & integration, JSON & HTTP, token-based auth, role-based access control, relational schema design, SQLite, MongoDB
Tools & cloud	Git & GitHub, Docker, Postman, Google Cloud Run, Figma
Ways of working	Agile delivery, requirements gathering, technical writing, functional / integration / usability testing

EXPERIENCE

Junior Software Developer · G-Mobility Investment Technology CC

Jun 2023 – May 2024

Windhoek, Namibia · promoted from Software Development Intern

- Built, tested and deployed full-stack web applications with React, Node.js (Express) and MongoDB in a shared, code-reviewed Git codebase.
- Project manager and full-stack developer on a four-person team. Wrote the system requirements specification and designed the data model and REST API shared by a web console and a mobile app.
- Implemented role-based authorisation and integrated third-party services over REST with token-based authentication.
- Built web and tablet front ends from Figma prototypes for a system that digitised a paper-based auction process.
- Led client interviews and requirement-gathering sessions, and wrote technical documentation that improved team onboarding.

VR Development Intern · Aalborg University, Denmark

Sep 2025 – Jan 2026

- Developed an immersive VR application in Unity 6 (C#) as my honours research project, from user research and storyboarding to full implementation.
- Engineered event-driven interactive systems: hand-tracked mechanics, scene transitions, narration triggers and environment-state logic.
- Ran iterative usability testing and refined interaction clarity, audio balance and performance between rounds.

SELECTED PROJECTS

Hymmalation	Offline desktop app for projecting song lyrics at live events, with PDF import, full-text search and a cloud-synced shared library. Python · SQLite · Google Cloud Run
Queuehub	Virtual queue management platform with a React web console and a React Native public app on one REST backend. React · Node.js · MongoDB
Auction Era	Three-role digital auction system that replaced a paper-based process and runs on low-end hardware. React · Node.js

Details, screenshots and code for these and other projects are on my portfolio and GitHub.

EDUCATION

Bachelor's + Honours in Computer Science, Software Development
Namibia University of Science and Technology (NUST)

Diploma in Real-Time Computer Graphics
Aalborg University, Denmark

LANGUAGES

English (native) · Afrikaans (intermediate) · German (beginner) · Rukwangali (beginner)
